Little Giant started with a need to solve a problem. In 1926, plumber R.M. “Doc” Wolfe had an issue with pumps failing at a frustrating rate; so he came up with an idea and enlisted the help of an inventor named Harry Goodman to create the world’s first evaporative pump. In 1941, the Little Giant Vaporizer was born – and so was the Little Giant brand. The innovative, patented pump became the cornerstone of Little Giant and laid the foundation for a company dedicated to solving the pumping problems professionals face every day.
